

Global Health

Health does not stop at national borders. With increasing globalisation there is a need for medical doctors with a broad vision on the many health issues that the world is facing today. If you want to work in the tropics or plan to do an elective in low or middle income countries, or simply because you are interested to explore this area, this half minor is for you.

Introduction

The half minor Global Health starts with a general, basic introduction to Global Health of four weeks where the students become acquainted with the health topics currently challenging low and middle income countries. During this introduction, module students will become familiar with the interrelationship between global health policy and clinical disease manifestation around the world.

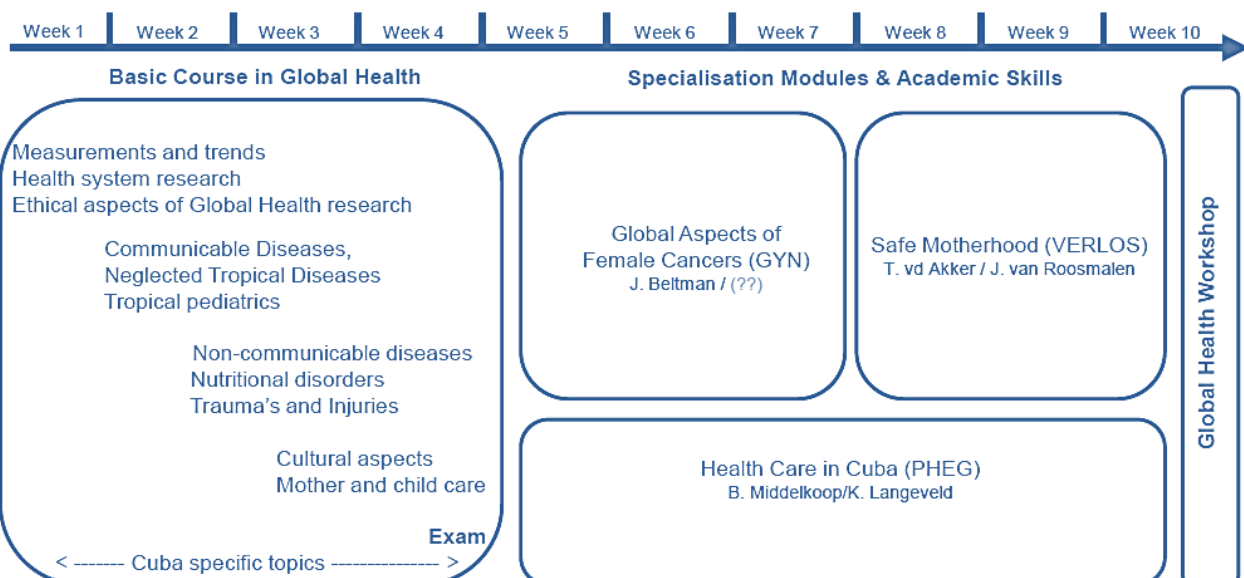

Hereafter, specific topics such as HIV and safe motherhood in developing countries.

Quote

“This half minor literally broadens your horizons by incorporating politics, economics and ethics into your role as a doctor.”

Overview

½ Minors: Global Health - LUMC & Global Health - Cuba

Quote

“Teachers had diverse areas of expertise and engaged students in their work and research ”

Learning goals

At the end of this half minor, students are aware of the current global health situation and can describe global health using health determinants. Students can also identify ethical, social, and cultural principles for making decisions in global health management. For academics, students learn how to design scientific research and reflect on population health interventions.

Assessment

- Written exam on introduction to Global Health (40% of final grade)
- Literature presentation + report on HIV (30% of final grade)
- Intervention presentation + report on safe Motherhood (30%)
